

The below websites will be useful for your revision, use these in combination with your revision guides, exam practice workbooks and revision flash cards that you have already been given.

In maths exams, any of the topics can be assessed on any paper, you are free to revise any and all topics, we obtain our grade by gaining a certain amount of marks and those marks can come from anywhere.

On the mathsgenie site I would recommend revising all topics in the following way.

Aiming for grade 4 – revise grades 1-3 as a priority and then move onto grade 4

Aiming for grade 5 revise grades 1-4 as a priority then move onto grade 5.

Set 1 students, I would ensure you revise grades 4, 5 and 6.
